MEDIA ANNOUNCEMENT - PROJECT AWARD

Remsafe is proud to announce that it has been awarded one of its largest export projects to deliver its patented technology Remote Isolation Systems (RIS) for a Tier 1 mining house in Africa.

Engineering and design work will be undertaken by Remsafe's in-house engineering team, followed by manufacture, preassembly and Factory Acceptance Test (FAT) being completed in Remsafe's Osborne Park, Western Australian fabrication facilities.

The project will create opportunities for local employment and subcontracting, reinforcing Remsafe's commitment to contributing positively to the communities in which we operate.

Commenting on the Remsafe's project award, Remsafe's Director, Mr Jack Sato, said: "We are delighted to secure the contract of this prestigious project which establishes Remsafe as a key Original Equipment Manufacturer supplier of our global patented RIS technology for Tier 1 clients around Australia and globally."

Remsafe continues to expand its footprint in the Remote Isolations and Industrial Automation sector through organic and inorganic growth options.

With recent announcements by Australian Government of free-trade agreements with India and middle-east nations, Remsafe is exploring expansion options to open offices and facilities into India and Middle-East.
